Comment Sheet, 3904th Tng Sq (SAC)

EQUIPMENT COMMENT:

HOPNET RIFLE:

Excellent, except that the peep-sight easily becomes loose. For its purposes this rifle is splendid.

OTHER COMPONENT PARTS OF E & E KIT:

Excellent.

OTHER KITS:

MISCELLANEOUS:

The emphasis on the para-teepee is too great. It is extremely difficult to camouflage if snow is not present. The poncho will make a very satisfactory shelter in non-winter conditions and is easily concealed. Of course, the para-teepee is an excellent shelter, but its general use under evasion conditions when snow is absent is questionable.

Crew #9 Instructors, (Sgts Moore, Henry, and Bartlett, and Mr. Hawkins) should be highly commended. Mr. Hawkins' lecture and practical work in rock climbing was superior from the neophyte's point of view.

*We think of snow too - Paratepee for Say Ce Area  
for future - Low-top for field work  
Now work on Camouflage  
have white material*
